IN THE CLAIMS:

Please amend the claims as indicated. A complete set of the claims is included below, as well as the current status of each claim. This listing of claims will replace all prior versions, and listings, of claims in the application.

Claim 1 (Currently Amended) A method of security, comprising ~~the steps of~~:

- a) enabling an electronic device to run a controlled application with an encrypted record containing a copied serial number and a first authorization level, wherein said first authorization level is assigned to said electronic device and authorizes said electronic device to run controlled applications having authorization levels not exceeding said first authorization level;
- b) verifying that said electronic device is correctly enabled; and
- c) verifying that said first authorization level is of sufficient authority to run said controlled application on said electronic device, wherein a second authorization level of said controlled application does not exceed said first authorization level.

Claim 2 (Currently Amended) The method of security as described in Claim 1, wherein step a) comprises ~~the steps of~~:

- a1) fetching a serial number uniquely associated with said electronic device, said serial number located on said electronic device;
- a2) copying said serial number, forming said copied serial number that is identical to said serial number;
- a3) creating a record that contains said copied serial number and said first authorization level [, said first authorization level previously assigned to said electronic device];
- a4) encrypting said record, forming said encrypted record; and
- a5) storing said encrypted record in said electronic device.

Claim 3 (Currently Amended) The method of security as described in Claim 2, wherein step b) comprises ~~the steps of~~:

- b1) locating said encrypted record;
- b2) decrypting said encrypted record, if said encrypted record is located;

Appl. No.: 09/844,924
Inventor: Craig S. Skinner
Page 4 of 13

- b3) reading said copied serial number from said encrypted record, if said encrypted record is successfully decrypted;
- b4) fetching said serial number; and
- b5) comparing said serial number and said copied serial number.

Claim 4 (Currently Amended) The method of security as described in Claim 3, wherein step b) further comprises ~~the further step of:~~
executing said controlled application on said electronic device, said controlled application having controlled attributes;

Claim 5 (Currently Amended) The method as described in Claim 3, wherein said step c) comprises ~~the steps of:~~

- c1) reading said first authorization level from said encrypted record that is decrypted, if said serial number and said copied serial number match;
- c2) comparing said first authorization level with said second authorization level assigned to said controlled application; and
- c3) allowing access to said controlled attributes of said controlled application, if said first authorization level is of an equal or higher authorization level than said second authorization level.

Claim 6 (Original) The method as described in Claim 2, wherein step a) is performed with an enabler application, said enabler application enabling said electronic device to run applications having authorization levels equal to or lower than said first authorization level.

Claim 7 (Original) The method as described in Claim 6, comprising the further step of:
removing said enabler application from said electronic device after successfully completing step a).

Claim 8 (Original) The method as described in Claim 5, comprising the further step of:
aborting said application if any of the following conditions are met:

Appl. No.: 09/844,924
Inventor: Craig S. Skinner
Page 5 of 13

said encrypted record is not successfully located in step b1);
said encrypted record is not successfully decrypted in step b2);
said serial number and said copied serial number do not match in step b5); or
said first authorization level is of a lesser value than said second authorization level in
step c2).

Claim 9 (Original) The method as described in Claim 5, comprising the further step of:
denying access to said controlled attributes of said controlled application if any of the
following conditions are met:

said encrypted record is not successfully located in step b1);
said encrypted record is not successfully decrypted in step b2);
said serial number and said copied serial number do not match in step b5); or
said first authorization level is of a lesser value than said second authorization level in
step c2).

Claim 10 (Original) The method as described in Claim 1, wherein said encrypted record is stored
as a locked flash record in said electronic device.

Claim 11 (Original) The method as described in Claim 2, wherein said serial number is stored as
a locked flash record in said electronic device.

Claim 12 (Original) The method as described in Claim 5, wherein said controlled application
performs steps b) and c).

Claim 13 (Currently Amended) A method of security comprising ~~the steps of:~~

- a) executing an application on an electronic device, said application having
controlled attributes;
- b) locating an encrypted record that is stored in said electronic device, said
encrypted record containing a copied serial number and a first authorization level, wherein said

Appl. No.: 09/844,924
Inventor: Craig S. Skinner
Page 6 of 13

first authorization level authorizes said electronic device to run applications with controlled attributes having authorization levels not exceeding said first authorization level;

c) decrypting said encrypted record, if said encrypted record is successfully located;
d) fetching a serial number, if said encrypted record is successfully decrypted, said serial number uniquely associated with said electronic device and located on said electronic device;

e) reading said copied serial number from said encrypted record that is decrypted, if said encrypted record is successfully decrypted;

f) comparing said serial number and said copied serial number;

g) reading said first authorization level from said encrypted record that is decrypted, if said serial number and said copied serial number match;

h) comparing said first authorization level with a second authorization level assigned to said application, said first authorization level previously assigned to said electronic device; and

i) allowing access to said controlled attributes of said application, if said first authorization level is of an equal or higher authorization level than said second authorization level.

Claim 14 (Currently Amended) The method as described in Claim 13, further comprising the ~~further steps of:~~

j) fetching said serial number;

k) copying said serial number, forming said copied serial number that is identical to said serial number;

l) creating a record containing said copied serial number and said first authorization level, said first authorization level previously assigned to said electronic device;

m) encrypting said record, forming said encrypted record; and

n) storing said encrypted record in said electronic device.

Appl. No.: 09/844,924
Inventor: Craig S. Skinner
Page 7 of 13

Claim 15 (Original) The method as described in Claim 14, wherein an enabler application performs steps j) through n) to enable said electronic device to run applications having authorization levels equal to or lower than said first authorization level.

Claim 16 (Original) The method as described in Claim 13, wherein said application performs steps b) through i).

Claim 17 (Original) The method as described in Claim 14, wherein the same encryption/decryption protocol is used in performing steps c) and m).

Claim 18 (Original) The method as described in Claim 13, comprising the further step of:
aborting said application if any of the following conditions are met:
said encrypted record is not successfully located in step b);
said encrypted record is not successfully decrypted in step c);
said serial number and said copied serial number do not match in step f); or
said first authorization level is of a lesser value than said second authorization level in step h).

Claim 19 (Original) The method as described in Claim 13, comprising the further step of:
denying access to said controlled attributes of said application if any of the following conditions are met:
said encrypted record is not successfully located in step b);
said encrypted record is not successfully decrypted in step c);
said serial number and said copied serial number do not match in step f); or
said first authorization level is of a lesser value than said second authorization level in step h).

Claim 20 (Currently Amended) A computer system comprising:
a bus;
a memory unit coupled to said bus; and

Appl. No.: 09/844,924
Inventor: Craig S. Skinner
Page 8 of 13

a processor coupled to said bus, said processor for executing a method of security comprising the steps of:

- a) enabling an electronic device to run a controlled application with an encrypted record containing a copied serial number and a first authorization level, wherein said first authorization level is assigned to said electronic device and authorizes said electronic device to run controlled applications having authorization levels not exceeding said first authorization level;
- b) verifying said electronic device is correctly enabled; and
- c) verifying said first authorization level is of sufficient authority to run said [a] controlled application on said electronic device, wherein a second authorization level of said controlled application does not exceed said first authorization level

Claim 21 (Currently Amended) The computer system as described in Claim 20, wherein step a) of said method comprises ~~the steps of~~:

- a1) fetching a serial number uniquely associated with said electronic device, said serial number located on said electronic device;
- a2) copying said serial number, forming said copied serial number that is identical to said serial number;
- a3) creating a record that contains said copied serial number and said first authorization level[, said first authorization level previously assigned to said electronic device];
- a4) encrypting said record, forming said encrypted record; and
- a5) storing said encrypted record in said electronic device.

Claim 22 (Currently Amended) The computer system as described in Claim 21, wherein step b) of said method further comprises ~~the steps of~~:

- b1) locating said encrypted record;
- b2) decrypting said encrypted record, if said encrypted record is located;
- b3) reading said copied serial number from said encrypted record, if said encrypted record is successfully decrypted;
- b4) fetching said serial number; and

Appl. No.: 09/844,924
Inventor: Craig S. Skinner
Page 9 of 13

b5) comparing said serial number and said copied serial number.

Claim 23 (Currently Amended) The computer system as described in Claim 22, wherein step b) of said method comprises the further step of:

executing said controlled application on said electronic device, said controlled application having controlled attributes[;].

Claim 24 (Currently Amended) The computer system as described in Claim 22, wherein said step c) of said method comprises ~~the steps of~~:

c1) reading said first authorization level from said encrypted record that is decrypted, if said serial number and said copied serial number match;

c2) comparing said first authorization level with said second authorization level assigned to said controlled application; and

c3) allowing access to said controlled attributes of said controlled application, if said first authorization level is of an equal or higher authorization level than said second authorization level.

Claim 25 (Original) The computer system as described in Claim 21, wherein step a) of said method is performed with an enabler application, said enabler application enabling said electronic device to run applications having authorization levels equal to or lower than said first authorization level.

Claim 26 (Original) The computer system as described in Claim 25, wherein said method comprises the further step of:

removing said enabler application from said electronic device after successfully completing step a).

Claim 27 (Original) The computer system as described in Claim 24, wherein said method comprises the further step of:

aborting said application if any of the following conditions are met:

Appl. No.: 09/844,924
Inventor: Craig S. Skinner
Page 10 of 13

said encrypted record is not successfully located in step b1);
said encrypted record is not successfully decrypted in step b2);
said serial number and said copied serial number do not match in step b5); or
said first authorization level is of a lesser value than said second authorization level in
step c2).

Claim 28 (Original) The computer system as described in Claim 24, wherein said method
comprises the further step of:

denying access to said controlled attributes of said controlled application if any of the
following conditions are met:

said encrypted record is not successfully located in step b1);
said encrypted record is not successfully decrypted in step b2);
said serial number and said copied serial number do not match in step b5); or
said first authorization level is of a lesser value than said second authorization level in
step c2).

Claim 29 (Original) The computer system as described in Claim 20, wherein said encrypted
record in said method is stored as a locked flash record in said electronic device.

Claim 30 (Original) The computer system as described in Claim 21, wherein said serial number
in said method is stored as a locked flash record in said electronic device.

Claim 31 (Original) The computer system as described in Claim 24, wherein said controlled
application in said method performs steps b) and c).
